Battery-electric tractors for Värnamo, 2027: order 6

Recommendation. Order 6 tractors under quotation Q-26-1187, for V02, V05, V09, V14, V16, V18. Not more: the duties V03, V07, V11, V30 need 450 to 460 kWh on the January design day against a limit of 442 kWh, and V21, V24, V27, V33 are further over.

Duty	Shipper	Delivery	Round trip km	Planning load t	Design-day kWh	Electric
V02	Kulltorps Cykel AB	Kalmar	309	3.9	410	Yes
V05	Bredaryds Plast AB	Ängelholm	300	7.7	420	Yes
V09	Vaggeryds Glas AB	Göteborg	262	21.0	400	Yes
V14	Värnamo Isolering AB	Karlskrona	325	4.6	440	Yes
V16	Rydaholms Pall AB	Varberg	289	9.0	410	Yes
V18	Anderstorps Elektronik AB	Alingsås	306	5.4	420	Yes
V03	Gnosjö Stålcenter AB	Helsingborg	284	29.0	450	No
V07	Skillingaryds Ballast AB	Linköping	281	32.0	460	No
V11	Hillerstorps Metall AB	Kristianstad	289	26.3	450	No
V21	Reftele Trä AB	Malmö	317	18.4	470	No
V24	Vaggeryds Glas AB	Oskarshamn	313	20.8	470	No
V27	Gränna Dryckes AB	Trollhättan	328	13.4	470	No
V30	Bankeryds Mejeri ek. för.	Uddevalla	312	13.4	460	No
V33	Kulltorps Cykel AB	Västervik	362	3.9	480	No

Energies to the nearest 10 kWh at -5 C and each duty's planning load. Limit: 85 per cent of the 520 kWh a 540 kWh battery keeps after its first year.

Basis. A model of each pilot duty-day's energy (2334 days) on distance, climb, cold, speed and payload. Four things move the order. (1) The pilot's payloads are shippers' declarations; at Värnamo, where the same shippers' loads are weighed, the clerks' figures scatter widely around the weighed load, and the dairy declares its planned pallets at a standard weight each. Fitted on the declarations a tonne costs 1.2 kWh per 100 loaded km; taking each declaration to the weighed load it stands for, shipper by shipper, 2.1. (2) Below freezing the draw rises faster: one rate below 16 C fitted without Jan-Feb 2026 under-forecast those sub-zero days by 6.4 per cent, a further rate below 0 C by +0.8. (3) The pilot batteries lost 3.8 per cent of their capacity for good in their first year, once the cold days' temporary loss is taken out. (4) The Värnamo duties are long runs on the E4, E6, 25 and 27, planned faster than any pilot day ran, and each 10 km/h costs about 6 kWh per 100 km at their speeds; on a -5 C day the pilot drove at 82 per cent of the routing tool's speed, so each duty is forecast at that share of its own.

If any one is skipped. No speed term: 9 tractors (V03, V11, V30 in). The routing tool's speed: 3. Declared weights: 8 (V03, V07, V11 in, V14 out). One cold rate: 9. No first-year loss: 10. The workbook has each route, the model, the calibration and the speeds.
