Shannonside 2027 quality schedule: the heavy-correction ceiling

12 January 2027. Jody Cahir, Head of Recognition Quality, for the account team.

We should commit to Ceiling C, 14 per cent.

A 10 per cent ceiling would be passed in the second quarter of 2027 and a 12 per cent ceiling in the fourth; no quarter is expected to pass 14 per cent.

The audited share has held between about 6 and 8 per cent since the middle of 2024, but that is two movements cancelling. Each release has lowered every clinician's error rate (5.0 alone by about 6 per cent), while more and more of Shannonside's dictation has come from clinicians who began only once their hospital made dictation compulsory: under release 6.0 about 19.2 per cent of their dictations need heavy correction, against 2.4 per cent for clinicians who chose to dictate. When no release came between February 2023 and June 2024 the share rose from about 6.6 per cent in the first half of 2023 to about 7.3 at the turn of the year. In 2027 recognition stays on release 6.0 for the Dublin migration, and Shannonside University (1 February 2027) and Ballykeel University (1 October 2027) make dictation compulsory for about 2,070 clinicians in post, of whom only 503 dictate today. Their rows read low now because only those who chose to dictate appear in them. With the clinicians who leave replaced by compulsory starters at the record's rate and the go-lives ramping up as the six earlier ones did, the voluntary clinicians' share of dictation falls from about 68 per cent in December 2026 to under two fifths by the fourth quarter.

2027	Expected share above 15%	Lowest ceiling it stays under	Voluntary clinicians' share of dictation
Q1	8.8%	10%	about 62%
Q2	11.1%	12%	about 48%
Q3	11.4%	12%	about 47%
Q4	13.1%	14%	about 36%

Nine in ten of the fourth quarter's dictations are expected to stay under 16 per cent word error rate.

Reweighting today's audited shares to 2027's hospitals would put every quarter under 10 per cent, and giving 2027's new dictators the level of the clinicians who began in 2025 and 2026 would stop at 12; the first reads the teaching hospitals' clinicians as the few who dictate there now, the second mixes those who chose to dictate with those who had to.
