The 2026 efficiency grant round

Fund roof insulation in the 2026 round, and neither heating optimisation nor heating controls. Insulation costs €85.53 of grant per lifetime tonne of CO2 on the 69 applications received by 12 June, and its 90% range (€79.67 to €94.17) is within the €120 limit. Heating optimisation (€100.92, range up to €233.08) and heating controls (€98.90, range up to €158.03) do not meet the committee's rule.

Measure	Grant per tonne	90% range	Fund	At close: applications	grant asked
Insulation	€85.53	€79.67 to €94.17	yes	198	€5,813,088
Heating optimisation	€100.92	€65.25 to €233.08	no	801	€1,208,872
Heating controls	€98.90	€78.04 to €158.03	no	515	€3,091,923

Grant per tonne on the applications received by 12 June (climate action plan 4.4). Range: the pilot's owners drawn again 1,000 times, every step repeated; the committee funds a measure where its upper end is €120 or less. At close: the offer closes on 30 June.

Why not heating optimisation

The pilot's measured saving levels at about 3.4 per cent from 2022/23, which would price it at €66.35 a tonne. But from September 2022 the state campaign's heating checks set every taker's heating curve back down, and the pilot's works buildings, balanced by their works, held what the check gave them while the passed-over owners' systems lost it within a winter. Read off each works building's seasons before its own check, the works alone keep 1.25 per cent by 2025/26. The campaign closed in March 2026, so the 2026 works will save 2.33 per cent of their reference use over their fifteen years, not 3.54. The 2022 price shock moved works and passed-over buildings alike and explains none of the gap.

Why not heating controls

Controls save more the longer a building stands empty, and this year's controls buildings stand empty 66 per cent of the week, so they price at €98.90 a tonne. But the pilot was drawn by owner, and an owner's facility manager runs every one of its buildings' timers the same way: the pilot's evidence for controls rests on a few large owners. Drawn again owner by owner, its range runs to €158.03; drawn building by building it would stop at €109.36 and look safe.

The round

The 69 insulation applications received by 12 June ask €1,553,940 and buy 18,168 lifetime tonnes of CO2; the workbook lists each with its grant and lifetime tonnes, the office's basis for issuing the grants. Once the offer closes on 30 June, insulation will have about 198 applications asking €5,813,088, heating optimisation 801 and heating controls 515.
