Q1 2027 label purchase for Draftline auto-send

To	Bridget Sanders, Head of Support Automation
Copy	Sophie Gibson, Procurement
From	Anna Gaines, Support Automation
Date	13 November 2026

Recommendation. Buy 38,000 Ardentdesk troubleshooting comparisons (USD 136,800) and do not take up the Tallyfield option. With the signed order, the Q1 2027 model is then expected to reach 81.0 per cent accuracy against the senior technicians on the planned 2027 mix (80 per cent range 79.4 to 82.5), against the 81.0 per cent bar.

Where we are. RM-22 is at 75.2 per cent on the 2027 mix against the standard and 64.9 on device troubleshooting. The 65.7 per cent on the dashboard is agreement with IS-25's 2025 Tallyfield labels, which share the crowd's errors and its pull to longer replies, so it neither measures the standard nor moves with it.

Why the signed order is not enough. In the 2026 audit 41 per cent of Tallyfield's troubleshooting judgments disagree with the technicians, against 13 per cent of Ardentdesk's; with the crowd's pull to longer replies and the pairs with no better reply set aside, the error is 38 per cent against 8. What a label teaches the model goes with the square of its signal, so a Tallyfield troubleshooting label is worth about 0.06 of an Ardentdesk one. The order's 139,500 troubleshooting comparisons add little, and every crowd label adds to the pull to longer replies that the technicians do not share. The signed order alone reaches 77.3 per cent; the whole option adds 1.6 points for USD 126,000.

	Current model	Signed order	+ whole option	+20k desk	+40k desk	+60k desk	+80k desk	+120k desk
Device troubleshooting	64.9	67.3	69.4	72.4	75.5	77.8	79.4	81.8
2027 mix	75.2	77.3	78.9	79.7	81.2	82.2	83.0	84.1

How it was built. Each source's error by ticket type comes from the 2026 audit; each run's accuracy from a joint fit of every run's IS-25 picks (read through the crowd's error and the pull the run shares with it) and the seven shadow reviews; the learning curve is in label information and stops short of 100 per cent because the technicians themselves split on some pairs. The range resamples the audit, IS-25, the reviews and the deliveries.
